CERTIFICATE

This is to certify that **SAHIL GUPTA** of **T.Y.BSC. CS** (Sem V), seat no. 15009 has satisfactorily completed the Project **AYURVEDIC CLASSIFICATION AS A RULE-BASED EXPERT SYSTEM**, to be submitted in the partial fulfillment for the award of **Bachelor of Science** in **Computer Science** during the academic year **2026 – 2027.**

Internal Guide **Coordinator**

External Examiner

Date: **College Seal**

DECLARATION

I, Mr. SAHIL GUPTA, a student of Theem College of Arts, Commerce and Science, pursuing the Bachelor of Science in Computer Science (B.Sc. C.S.) program, hereby declare that I have completed the project titled "AYURVEDIC CLASSIFICATION AS A RULE-BASED EXPERT SYSTEM" as part of my Indian Knowledge Systems (IKS) subject during the academic year 2026–2027.

The work presented in this project report is based on my own efforts, understanding, and learning. The information, concepts, and resources used in preparing this project have been properly acknowledged in the References section.

I further declare that this project report has not been submitted to any other university or institution for the award of any degree or diploma.

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to **Theem College of Arts, Commerce and Science** for providing me with the opportunity to complete this project titled **"AYURVEDIC CLASSIFICATION AS A RULE-BASED EXPERT SYSTEM"** as part of the **Indian Knowledge Systems (IKS)** subject.

I am deeply thankful to my project guide and subject faculty for their valuable guidance, encouragement, and support throughout the development of this project. Their suggestions and explanations helped me understand the concepts of Ayurveda and the application of rule-based expert systems in computer science.
I would also like to thank the Head of the Department and all the faculty members for providing the necessary resources and academic support required to complete this project successfully.

This project helped me gain knowledge about the traditional Ayurvedic classification of the three doshas—**Vata, Pitta, and Kapha**—and understand how predefined IF–THEN rules can be used to classify input characteristics in a simple computer-based expert system.

Finally, I would like to thank my family and friends for their encouragement and support during the completion of this project.

ABSTRACT

Ayurvedic Classification as a Rule-Based Expert System is a computer-based project developed as part of the **Indian Knowledge Systems (IKS)** subject. The project aims to demonstrate how traditional Ayurvedic knowledge can be represented using predefined rules in a simple expert system.

The system classifies user characteristics into three Ayurvedic doshas: **Vata, Pitta, and Kapha**. It accepts inputs such as body tendency, appetite pattern, activity level, sleep pattern, and response to weather. Based on predefined IF–THEN rules, the system assigns scores to each dosha and identifies the dominant classification.

The project demonstrates the application of traditional Indian knowledge in computer science through **rule-based reasoning, knowledge representation, input processing, and decision-making**. It also provides practical experience in developing a simple expert system using programming concepts.

In the future, the system can be enhanced with a graphical user interface, a larger knowledge base, multilingual support, and more detailed explanations of the classification results. This project is intended for educational purposes and does not replace professional Ayurvedic consultation or medical diagnosis.

Ayurvedic Classification – Rule-Based Expert System

Title: Ayurvedic Classification as a Rule-Based Expert System

Introduction

Ayurvedic Classification as a Rule-Based Expert System is a **B.Sc. Computer Science project** that demonstrates how traditional Indian knowledge can be represented and processed using concepts from **Artificial Intelligence and Expert Systems**.

Ayurveda is an ancient Indian knowledge system that uses the three doshas—**Vata, Pitta, and Kapha**—to describe different body characteristics and tendencies. In this project, selected Ayurvedic characteristics such as **body type, appetite, activity level, sleep pattern, and response to weather** are converted into computer-readable facts and rules.

The system uses a **Rule-Based Expert System**, where predefined **IF–THEN rules** represent the knowledge. For example, *IF appetite is strong THEN increase the Pitta score*. The system applies these rules to the user's inputs, calculates the scores of Vata, Pitta, and Kapha, and identifies the dominant classification.

From a **B.Sc. Computer Science perspective**, this project demonstrates important concepts such as **knowledge representation, rule-based reasoning, inference engines, classification, decision-making, and Python programming**. It also shows how traditional Indian Knowledge Systems (IKS) can be connected with modern Computer Science techniques.

The project is intended as an **educational demonstration of rule-based classification** and is not a medical diagnosis or treatment system.

Problem Statement

Ayurveda is a traditional Indian knowledge system that classifies individuals and health-related conditions using concepts such as **Vata, Pitta, and Kapha** (the three doshas). In this project, the Ayurvedic classification concept is mapped to a **Rule-Based Expert System** in Computer Science.

The system accepts simple user characteristics such as **body tendency, appetite, activity level, sleep pattern, and response to weather**. It applies predefined **IF–THEN rules** and calculates which dosha has the highest score.

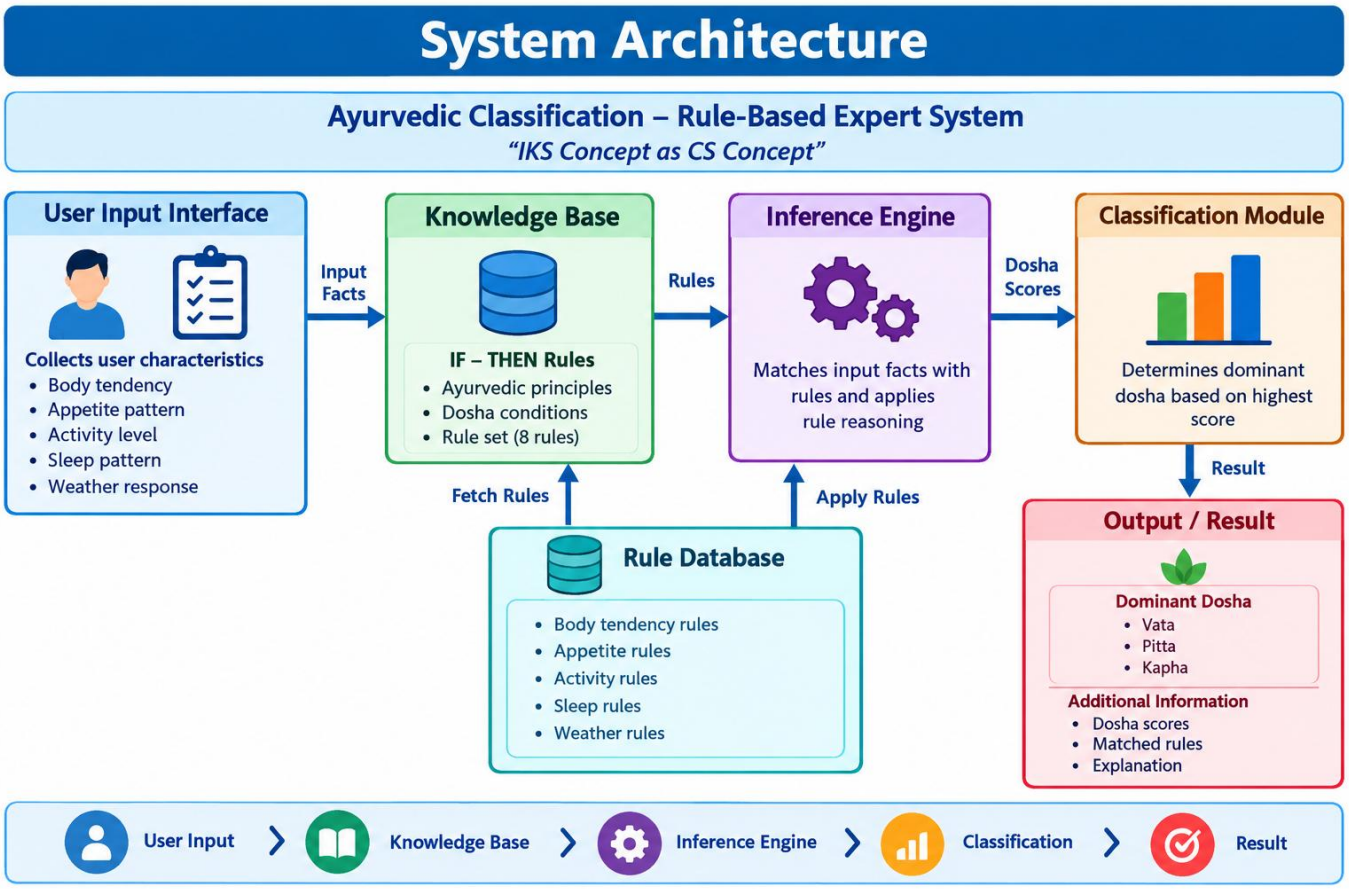

The objective is to demonstrate how traditional knowledge can be represented computationally using **facts, rules, inference, and classification**.

Conceptual Mapping Table

Ayurvedic Classification – Rule-Based Expert System

Sr. No.	Ayurvedic / IKS Concept	Computer Science Concept	System Implementation
1	**Vata, Pitta, Kapha**	Classes / Categories	Three classification categories
2	**Dosha characteristics**	Features / Attributes	Body, appetite, activity, sleep, weather
3	**Ayurvedic principles**	Knowledge Base	Stored as predefined rules
4	**Traditional expert knowledge**	Knowledge Representation	IF–THEN production rules
5	**Ayurvedic classification rules**	Production Rules	Example: IF appetite = strong THEN Pitta
6	**Observation of characteristics**	User Input / Facts	User selects characteristics
7	**Applying Ayurvedic rules**	Inference Engine	Python checks matching rules
8	**Dosha assessment**	Classification	Highest score determines result
9	**Dominant Dosha**	Predicted Class	Vata / Pitta / Kapha
10	**Multiple observations**	Feature Set	Collection of user inputs
11	**Rule matching**	Pattern Matching	Input values are compared with rules
12	**Dosha score**	Classification Score	Each matched rule adds one point
13	**Expert reasoning**	Rule-Based Reasoning	IF–THEN logical inference
14	**Traditional knowledge source**	Database / Rule Repository	Rule dictionary in Python
15	**Final Ayurvedic classification**	System Output	Displays dosha and scores

Basic architecture

Algorithm: Ayurvedic Rule-Based Classification

Objective

The main objective of this project is to classify a user's characteristics into Vata, Pitta, or Kapha using predefined IF–THEN rules.

Input

The system considers the following user characteristics:

- Body tendency
- Appetite pattern
- Activity level
- Sleep pattern
- Weather response

Output

The system provides the following outputs:

- Vata Score
- Pitta Score
- Kapha Score
- Dominant Dosha

Step-by-Step Algorithm

1. Start
2. Initialize three scores:
   - Vata = 0
   - Pitta = 0
   - Kapha = 0
3. Ask the user to enter their body tendency.
4. Apply the corresponding IF–THEN rule:
   - IF body = thin → increase Vata
   - IF body = medium → increase Pitta
   - IF body = solid → increase Kapha
5. Ask the user for their appetite pattern.
6. Apply the corresponding IF–THEN rule and update the appropriate score.
7. Ask for the activity level and apply its rule.
8. Ask for the sleep pattern and apply its rule.
9. Ask for the weather response and apply its rule.
10. Add the scores obtained from all matching rules.
11. Compare the Vata, Pitta, and Kapha scores.
12. If Vata has the highest score, classify the user as Vata.
13. If Pitta has the highest score, classify the user as Pitta.
14. If Kapha has the highest score, classify the user as Kapha.
15. If two or more scores are equal and highest, classify the user as Mixed/Equal.
16. Display the Vata score, Pitta score, Kapha score, matched rules, and final classification.
17. Stop.

Pseudocode

```
START

Vata ← 0
Pitta ← 0
Kapha ← 0

Output

Test Cases

The following test cases can be included in the **Ayurvedic Classification – Rule-Based Expert System** practical.

Test Case	Body Tendency	Appetite	Activity	Sleep	Weather	Expected Result
TC01	Thin	Irregular	Restless	Light	Cold	**Vata**
TC02	Medium	Strong	Active	Moderate	Hot	**Pitta**
TC03	Solid	Steady	Slow	Deep	Damp	**Kapha**
TC04	Thin	Irregular	Active	Light	Cold	**Vata**
TC05	Medium	Strong	Active	Deep	Hot	**Pitta**
TC06	Solid	Steady	Slow	Moderate	Damp	**Kapha**
TC07	Thin	Strong	Active	Moderate	Hot	**Pitta**
TC08	Solid	Irregular	Slow	Deep	Damp	**Kapha**
TC09	Medium	Irregular	Restless	Light	Cold	**Vata**
TC10	Medium	Strong	Slow	Moderate	Hot	**Pitta**

Explanation

1. TC01: Thin body, irregular appetite, restless activity, light sleep, and cold weather indicate Vata.
2. TC02: Medium body, strong appetite, active lifestyle, moderate sleep, and hot weather indicate Pitta.
3. TC03: Solid body, steady appetite, slow activity, deep sleep, and damp weather indicate Kapha.
4. TC04: Thin body, irregular appetite, active lifestyle, light sleep, and cold weather indicate Vata.
5. TC05: Medium body, strong appetite, active lifestyle, deep sleep, and hot weather indicate Pitta.
6. TC06: Solid body, steady appetite, slow activity, moderate sleep, and damp weather indicate Kapha.
7. TC07: Thin body, strong appetite, active lifestyle, moderate sleep, and hot weather indicate Pitta.
8. TC08: Solid body, irregular appetite, slow activity, deep sleep, and damp weather indicate Kapha.
9. TC09: Medium body, irregular appetite, restless activity, light sleep, and cold weather indicate Vata.
10. TC10: Medium body, strong appetite, slow activity, moderate sleep, and hot weather indicate Pitta.

Complexity & Limitations

The **Ayurvedic Rule-Based Expert System** checks the user's characteristics against a fixed set of predefined rules.

- **Time Complexity (O(n))**

Where **n** = number of input characteristics/rules checked.

For our implementation:

- Body tendency → 1 check
- Appetite → 1 check
- Activity → 1 check
- Sleep → 1 check
- Weather → 1 check

Therefore, the system performs a small, fixed number of operations and gives the result quickly.

- **Space Complexity(O(n))**

Memory is used to store:

- Knowledge-base rules
- User inputs
- Dosha scores
- Matched rules

Limitations

1. **Simplified Knowledge:** The project uses a limited set of Ayurvedic characteristics and does not represent the complete Ayurvedic knowledge system.
2. **Fixed Rules:** The system depends on predefined IF–THEN rules and cannot automatically learn new rules.
3. **Limited Input:** Only five characteristics are considered: body tendency, appetite, activity, sleep, and weather response.
4. **Subjective Answers:** User responses may not always be accurate or consistent.
5. **No Machine Learning:** The system does not improve its classification from previous results or datasets.
6. **Mixed Classification:** When two or more doshas receive the same highest score, the system may return **Mixed/Equal Classification**.
7. **Not a Medical System:** The output is intended only for demonstrating **IKS knowledge representation and rule-based classification**. It should not be used for medical diagnosis or treatment.

Conclusion

The **Ayurvedic Classification – Rule-Based Expert System** successfully demonstrates how an **Indian Knowledge System (IKS)** can be represented using Computer Science concepts.

In this project, Ayurvedic concepts such as **Vata, Pitta, and Kapha** are represented as classification categories, while traditional characteristics are converted into **facts and IF–THEN rules**. The inference engine evaluates the user's inputs, applies the predefined rules, calculates the dosha scores, and produces a classification.

This project demonstrates important concepts of **Artificial Intelligence, knowledge representation, rule-based reasoning, inference engines, and classification**. It also shows how traditional Indian knowledge can be connected with modern computational techniques.

Therefore, the project provides a simple and practical example of converting an IKS concept into a Computer Science rule-based expert system.
